SUMMARY

I am a BTech Final year CSE student specializing in Data Science, with hands-on experience in **machine learning, data analysis, and backend systems**.

Brings hands-on experience in **predictive modeling and computer vision**, with a strong focus on solving practical problems using modern AI/ML tools and data-driven approaches .

SKILLS

Languages — Python, SQL

Libraries/Frameworks — Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch, OpenCV, Flask, FastAPI

Tools & Platforms — Git, GitHub, Jupyter Notebook, MongoDB, Streamlit, Prometheus

Core Concepts — Machine Learning, Data Analysis, Data Visualization, Computer Vision, REST APIs, Feature Engineering

PROJECTS

Deepfake detection Web App [↗](#)

- Engineered a real-time deepfake detection system using Flask and TensorFlow, **achieving 95% accuracy** and reducing false positives by **40%**.
- Optimized** model performance using MobileNetV2, improving inference **speed by 35%**.
- Implemented feature extraction techniques (sharpness, compression artifacts, variance) for robust predictions.

Youtube video fetcher api [↗](#)

- Developed a **scalable Flask-based REST API** using YouTube Data API v3 to fetch and store real-time video data.
- Implemented asynchronous processing, **reducing response latency by 50%**
- Optimized** MongoDB queries with indexing, improving **performance by 60%**.
- Built API key rotation system **ensuring 99% availability** under quota limits.

Predictive API Latency Forecasting

- Designing a scalable machine learning pipeline using LSTM and XGBoost for time-series forecasting of API latency (p95) 5–15 minutes ahead.
- Building a real-time data ingestion and processing system using FastAPI and Docker with asynchronous architecture for high-throughput backend monitoring.
- Integrating observability tools (Prometheus, Grafana) for real-time metrics tracking, visualization, and predictive alerting.
- Targeting reduction of latency spikes and improved backend reliability through predictive scaling strategies.

EDUCATION

Bachelor of Technology (B.Tech) Computer Science (Data Science Specialization)

Shri Ramswaroop Memorial College Of Engineering and Management

2023 – Present

Lucknow

KEY ACHIEVEMENTS

AI Model Development — Achieved 95% accuracy in deep learning-based computer vision model (Deepfake Detection).

Backend Performance Optimization — Improved system performance by 60% through database query optimization (MongoDB indexing).

System Performance Enhancement — Designed high-availability backend system (99% uptime) using API key rotation and fault-tolerant architecture.
